

Job Summary:

Scientist with strong methodological and analytical skills who provides technical support in the design and implementation of selected Epidemiology International (EI) research endeavors.

Responsibilities:

- In conjunction with PhD-level scientists, design, plan, and execute research projects.
- Analyze and interpret data, write reports, and prepare presentations for clients.
- Analyze data and write reports for scientific publication; prepare presentations for scientific meetings.
- Assume responsibility for project tasks.
- Assist with bid preparation and proposal development.
- Provide support in additional areas of EI business, as needed.

Abilities/skills:

- Strong background in public health, epidemiology, and/or biostatistics.
- Knowledge of statistical software packages such as Stata, SPSS, SAS, etc.
- Proficiency in commonly used office computing software and reference management software.
- Highly motivated, independent worker with enthusiasm for public health research.
- Ability to work independently as well as effectively communicate and collaborate in a team environment.
- Excellent oral and written communication skills.
- Ability to adjust to changing priorities and to work in teams.
- Strong organization and analytic skills.
- Outstanding attention to detail.
- Flexible, resourceful, willing to help wherever needed.

Experience required:

Candidates should have a master's degree in a public health field and some experience working in a research environment.

Education:

Graduate degree in a public health field, preferably Epidemiology or Biostatistics.

Interested candidates should email current resume/CV to jobs@epiinternational.com
